A tech-savvy professional and curious individual with extensive experiences working with software development, distributed systems, and computer networks.

EXPERIENCE

PT Gravel Technology, Remote — *DevOps/Backend Engineer*

June 2020 - Present

Gravel is an early-stage startup that tries to disrupt a largely untouched construction (building) industry in Indonesia. I was responsible for designing automation pipelines, including for Android, iOS, as well as Quality Assurance Test. Apart from that, I was also responsible for deploying and maintaining various infrastructure stacks, such as Kubernetes, PostgreSQL, RabbitMQ, and Vault. Lastly, I also performed day-to-day operations related to SLO monitoring and troubleshooting.

PT Bukalapak.com, Jakarta — *Site Reliability/System Engineer*

October 2017 - August 2019

Bukalapak is one of the largest e-commerce sites in Indonesia with more than 6 million online sellers. I was responsible for designing the automated deployment for their main load balancer configuration. I was also largely involved in the service migration from their own data center to the (Google) cloud environment at the end of my term there.

SNMPTN Technical Committee, Bandung — *DevOps Engineer*

November 2016 - April 2018

SNMPTN is a nationwide university-level student selection program organized by the Ministry of Education and Culture of the Republic of Indonesia. I was in charge of the cache system implementation to ensure system stability during the surge during the selection announcement. I was also tasked with creating various scripts to aid the committee get the required data from the PostgreSQL cluster.

EDUCATION

EIT Digital Master School, European Union — *M.Sc in Cloud and Network Infrastructure*

August 2019 - Present

Entry University: Université de Rennes 1, Rennes (France)
Exit University: Technische Universität Berlin, Berlin (Germany)

Institut Teknologi Bandung, Indonesia — *B.Sc in Informatics/Computer Science*

August 2013 - October 2017

Thesis: *Auto-Scaling System for Docker-based Service*
